The Problem

Headline: The gap in the water column

Between 50 and 300 meters lies the ocean's twilight zone. It's full of marine life, yet few people ever get to look at it.

- **Too deep for divers.** Most of this zone is beyond safe diving limits.
- **Too expensive to visit often.** Remotely operated vehicles need pilots and boats, commercial underwater robots cost $50,000 to over $1 million, and ship time costs tens of thousands of dollars a day. [Add a source for these numbers.]

- **Close to home.** Deep reefs off Texas and Louisiana, including Flower Garden Banks, sit in this zone.

Depth bands (simple graphic):

Depth	Label
0–50 m	Sunlit. Within reach of divers.
50–300 m	Twilight zone. Too deep for divers, too costly to revisit.
300 m+	Reached by research ships and deep vehicles.

News

Newest first. Each entry: date, title, one or two sentences, a photo if we have one.

Date	Update
Coming soon	**First motor spin test.** Our first thruster runs on the bench.
Oct 16, 2026	**Power system built.** The fused battery lead and power wiring are built and tested.
Oct 9, 2026	**First parts ordered.** Parts for our first test vehicle are on the way.
[Date]	**Project kicks off.** [One line on how Talosaur started.]

Who we are

Intro: We're a team of students from Texas A&M and UT Austin. Most of us build in College Station.

Name	Role	Major and year
Fernando Guzman	Project Lead	[Major, year]

Name	Role	Major and year
[Name]	Ocean Engineer	[Major, year]
[Name]	Electrical Engineer	[Major, year]
[Name]	CAD Lead	[Major, year]

Each card: photo, name, role, and an optional LinkedIn link.

Positions

Headline: Help us explore the twilight zone

Intro: We're looking for motivated students who want to build something real. No ocean experience needed. Most roles take about [X] hours a week.

Open positions (edit this list to match what you actually need):

Position	What you'd do	Helpful skills
Embedded Software Engineer	Write microcontroller code for motor control, sensors and safety systems	C/C++, Arduino or ESP32
Computer Vision / ML Engineer	Help the robot spot and track marine animals in video	Python, PyTorch, OpenCV
Mechanical Engineer	Design and test the frame, mounts and waterproof parts	CAD (SolidWorks, Fusion), 3D printing
Marine Biology Researcher	Help us choose study sites and identify what we film	Marine biology or ecology coursework
Business Development	Talk to potential users and research the market	Interest in startups, good communication
Web and Media	Keep the website updated, edit build videos and photos	Web basics, video editing

Each position gets an **Apply** button that opens the application form with that position preselected (or just links to the form).

Application form

Set it up like a real job application: Talosaur logo at the top, our colors, short sections, required fields marked. Google Forms or Microsoft Forms work; Tally looks more polished. (Note: resume upload in Google Forms requires applicants to sign in with Google.)

Form title: Talosaur Team Application

Intro: Thanks for your interest in Talosaur. This takes about 10 minutes. We review applications on a rolling basis.

1. Your information

- Full name *
- University email *
- Phone number
- Major *
- Classification * (Freshman, Sophomore, Junior, Senior, Graduate)
- Expected graduation date *

2. Position

- Position applying for * (dropdown of open positions)
- Second choice (optional)
- Hours per week you can commit * (Under 5, 5–10, 10+)
- When can you start? *

3. Experience

- Resume (PDF) *
- LinkedIn profile
- GitHub or portfolio link

4. Short answers

- Why do you want to join Talosaur? (150 words max) *
- Tell us about a project you built and what your part was. (200 words max) *
- What do you hope to learn with us?

5. Final

- How did you hear about us?
- Checkbox: I confirm the information above is accurate. *

Confirmation message: Thanks for applying to Talosaur. We'll review your application and reply within [X] days.

Donate

Headline: Support our research

Text: Talosaur is student-built and runs on a tight budget. Your support funds parts, testing and field trips, and helps us bring affordable ocean exploration to more people.

Ways to help:

- Fund research: support a specific study or field test
- Sponsor a project: back a build like Turtle or our eDNA sampler
- Give in kind: parts, equipment, pool or boat time

Button: Contact our finance team → [finance email or form]

No online payments on the site for now; every donation starts with a conversation.

Work with us

Contact page headline: Get in touch

Text: Do you work with marine life between 50 and 300 meters, in research, conservation, fisheries or offshore energy? We'd love a 20-minute conversation about how you study it today.

- Email: [team email]
- Location: College Station, Texas
